

LUAS TERMINUS, DUBLIN

KING POST WALL

Title: Luas Terminus, Dublin

Contractor: Siac Construction

Description:

This project involved the construction of a King Post Wall for a Luas Terminus in close proximity to the Luas tramway.

Holes were bored in the granite bedrock at 400mm diameter. The hole was then part filled with concrete and a steel column was set in place to allow the main contractor, Siac Construction, to excavate and place in precast concrete panels to support a deep excavation and install a new water main.
